Animal-Derived Component Free Policy

Bacterial Source:

All our products expressed in bacteria are produced without animal-derived raw material. For our raw materials and our process material, we are looking for certification from our suppliers that the materials are of “Non-Animal Origin” or Animal-Derived Component Free “ADCF”. However, some components used during the process may be from animal origin (ex: Heparin Sepharose in downstream process). In that case, only safe animal-derived material is accepted. If possible, it is pharmaceutical grade and we obtain from our supplier certification of the animal species, tissue of origin and country of origin.

Raw material / Process material:

Category 1:

Raw materials and process materials are certified Animal-Derived Component Free. In that case, we obtain certification from all our raw material and process material suppliers that the materials are of “Non-Animal Origin” or “ADCF”.

Category 2:

Raw materials are “ADCF” but some process materials are animal-derived. For these process materials, only safe products are accepted. If possible, it is pharmaceutical grade and with these materials we obtain from our supplier certification of the animal species, tissue of origin and country of origin.

Mammalian Source:

Our products expressed in mammalian cells contain, other than the cell themselves, raw materials and process materials that are animal-derived component free, if possible. For these raw materials, we have certification from our suppliers that the materials are of “Non-Animal Origin” or “ADCF”. However, when it is not possible, raw materials or process materials of animal origin are used but only safe animal-derived material is accepted. If possible, it is pharmaceutical grade and we obtain from our supplier certification of the animal species, tissue of origin and country of origin.

Raw material / Process material:

Category 3:

Raw materials and process materials, other than the cells, are certified animal-derived component free. In that case, we obtain certification from all our raw material and process material suppliers that the materials are of “Non-Animal Origin” or “ADCF”.

Category 4:

Raw materials or process material are animal derived. For these materials, only safe products are accepted. If possible, it is pharmaceutical grade and with these materials we obtain from our supplier certification of the animal species, tissue of origin and country of origin.
